Project: Duck Pond Aeration System Recommendations

Hello John,

As we discussed after the latest issue with the Duck Pond Aeration System, we have reached the useful life of the existing system.

We are recommending replacing the system with a new compressor system with all new compressors, upgraded sound reduction and ventilation.

We are well past the life of the existing lease program. We were willing to keep that program going as long as the current system was viable. We are recommending a hybrid purchase/service program moving forward where we will still provide the same service, cleaning and repair and replacement of the in-water components of the system.

For compressor repair or replacement, we will need to charge the replacement cost of the component. However, we will warranty all equipment on the new system for one year.

New System Design

New Duck Pond Aeration Compressor System

- 2 EB 2P8 Aeration Compressors – each will run 2 diffusers
- Sound insulated, weatherproof, ventilated enclosure

Aeration Compressor System Cost: \$4,850 one-time cost

*** One-year warranty on all components in new compressor system**

Installation: \$850

Annual Service: \$2,900
