PROJECT DESCRIPTION

Buildings 4 and 5 were previously approved by the Town of Nolensville as two separate two-story buildings. For this resubmittal, the two approved building configurations have been consolidated into a single building, now identified as Building 5. The revised concept maintains a partial two-story massing on one side, while the remaining portion is designed as a single-story mass.

This configuration maintains the architectural character, style, proportions, scale, façade treatment, and materials of the original approved design while creating a more cohesive architectural form and a smooth transition in scale across the site.

LANDSCAPE REVISIONS

The proposed landscape plan retains the previously approved landscape design, with only minor adjustments to accommodate the revised building configuration. The overall landscape character and planting approach remain consistent with the original approval. Plant materials will be installed according to the proposed landscape plan, with changes limited to those necessary to coordinate with the revised building layout. The intent is to preserve the established landscape design and maintain continuity with the previously approved site plan.
